AINEXA DIGITAL SAFE LOCKER
— S6 Password & Fingerprint Model —

S6 PASSWORD & FINGERPRINT MODEL OPERATION GUIDE

1. Fingerprint Setup

(1) Press the setup button once. After hearing a short "beep" and the fingerprint scanner lights up, place the finger to be registered centered on the scanner.

(2) After pressing the finger and hearing a short "beep", remove the finger and press again. Repeat this 4 times.

(3) When a long "beep---" is heard, the fingerprint registration is successful. The lock can store up to 30 fingerprints.

2. Password Setup

(1) Press the setup button twice consecutively. After hearing a short "beep" and the numeric keypad lights up, enter a 1-8 digit password (any input beyond 8 digits will overwrite the 8th digit), then press the "#" key.

(2) After hearing a long "beep---" and the "right" light flashes, re-enter the same password and press the "#" key.

(3) If the two passwords are the same, a long "beep---" will sound, indicating the new password is set successfully.

3. Door Opening Mode Setup

(1) Normal opening mode: Touch the keypad area, press "1", then press the setup button. A long "beep, beep---" sound indicates successful setup (unlocks with password or fingerprint).

(2) Safe mode: Touch the keypad area, press "2", then press the setup button. A long "beep, beep---" sound indicates successful setup (unlocks with password + fingerprint).

4. Vibration Alarm and Mute Function

Vibration Alarm

(1) Touch the keypad area, press the "*" key. All lights will turn on with a long "beep---beep---beep---" sound, activating the alarm. To deactivate during an alarm, enter the correct password or use a registered fingerprint.

(2) The system defaults to vibration alarm off when powered on.

(3) The vibration alarm turns off after each door opening and needs to be reactivated.

Mute Function

(4) Long-press the number "1" key for 3 seconds. The "RIGHT" light will stay on briefly, and the buzzer will be muted.

(5) Long-press the number "1" key again for 3 seconds. The "RIGHT" light will stay on briefly with a long buzzer sound, activating the buzzer prompts.

5. Restore Factory Settings

(1) Long-press the button for about 5 seconds (do not release). A long "beep---" sound indicates successful restoration.

(2) The user password will reset to "123456", and all fingerprints will be cleared.

6. Unlocking in Normal Mode

Fingerprint Unlocking

(1) Place the finger on the scanner. A long "beep---" sound means the electromagnet is activated. If recognition fails, a "beep-beep-beep" sound will play. After 6 consecutive failures, an alarm will sound for 1 minute.
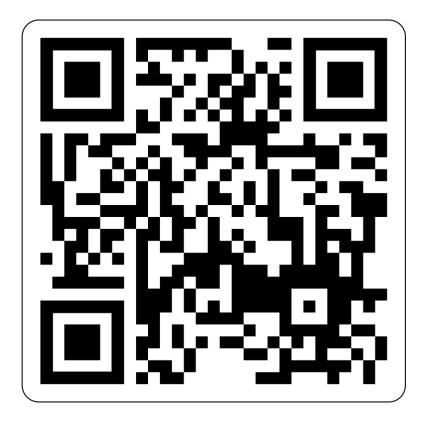

Password Unlocking

(2) In the locked state, touch the screen, enter the password, and press the "#" key to confirm. A long "beep---" sound means the electromagnet is activated. If the password is entered incorrectly 5 times, an alarm will sound for 1 minute.

7. Unlocking in Safe Mode

(1) Password first: Enter the password and press the "#" key. After a long "beep---" followed by a short "beep", the fingerprint scanner will light up. Place a registered finger; a long "beep---" sound means the electromagnet is activated.

(2) Fingerprint first: Place a registered finger. After a long "beep---" followed by a short "beep", the backlight will turn on. Enter the correct password and press "#"; a long "beep---" sound means the electromagnet is activated.

8. Low Voltage

When the voltage is 4.8V (+/-0.3V) or lower, after unlocking with the correct password or fingerprint, a "beep-beep-beep, beep-beep-beep, beep-beep-beep" prompt will sound, indicating the battery needs replacement for normal operation!
